REPORT DISCLAIMER & METHODOLOGY

This report was generated by SENTINEL-X, an automated SOC threat intelligence platform. The ML pipeline uses Isolation Forest for unsupervised anomaly detection and Random Forest for supervised threat classification. Risk scores are computed using a weighted ensemble of anomaly scores and classification confidence.

The AI analyst report (if enabled) is generated by a Large Language Model and should be reviewed by a human analyst before taking action. SENTINEL-X does not guarantee the accuracy of AI-generated recommendations.

Threat intelligence enrichment is based on publicly available data and may not reflect the most current threat landscape. All IP addresses, ports, and protocols referenced in this report are derived from the uploaded dataset.
